Who is Agri-Africa Exhibition Ltd?

With the concept of holding agricultural exhibitions, the gaps within the sector will be addressed thus managing food security, hunger while at the same time empowering farmers

The annual Agri Africa Expo and Conference, is a concept by Agri-Africa Exhibition Limited.

The company was incorporated in 2022 by Mr Tito Mutai, who is the Director and the CEO, with the vision of creating an organization that will fill the gap of centralizing and commercializing data in agriculture on a global scale.

Agri-Africa Exhibition Ltd main

purpose is anchored towards empowering the agriculture sector in the Africa region.

Mr Mutai believes that his vision can only be achieved by building information systems that will create a medium for seamless interactions between the players in the entire agriculture business ecosystem.

These are systems for data collection, storage, and analysis that allows us to understand and communicate what

The services offered by Agri-Africa Exhibition Limited are: -

1. Agricultural Exhibitions and Conferences.
2. Organizing Training Programs & Business Forums – Agriculture related.
3. Commercial Promotions for Agricultural Products and Services and
4. Obtaining and Maintaining Database for Agricultural Companies, Products and Services.

products and services each company is offering while at the same time allowing our partners and customers to interact within a verifiable platform.

Equally, Mr Mutai believes the African continent has a lot to offer in the agriculture sector, but farmers have not realized their dreams fully because of the inadequacy of forums to disseminate information, sharing and exchanging of ideas.

With the concept of holding agricultural exhibitions, the gaps within the sector will be addressed thus managing food security, hunger while at the same time empowering farmers.

The company was therefore established to specialize on information services in agriculture, implying; Identifying opportunities within the sector and processing information around them making it fit for dissemination to the public in a manner that the opportunities can be easily understood and for ease of utilization.

MR TITO MUTAI

CEO: AGRI-AFRICA EXHIBITIONS

...the exhibition clearly demonstrated the potential of our local market in terms of production and processing of agricultural produce

Agri-Africa Expo and Conference 2023 Overview and Report

The Agri-Africa Expo and Conference 2023, was the first agricultural trade fair to be organized by Agri-Africa Exhibitions Ltd in partnership with the Kenya Climate Innovation Centre (KCIC), Nation Media Group Plc (NMG) among other strategic partners.

The Ministry of Agriculture also endorsed the organizers' concept.

With the first edition being held at the Kenyatta International Convention Centre (KICC), in Nairobi, Kenya between

May 9 to 12, 2023, the conference theme was "Using Information to Power Agriculture in Africa".

Various technologies, innovations, irrigation systems, farm tools, equipment including use of drones, climate change solutions, value addition techniques on agricultural produce, among others were on display.

It was graced by a total of 170 exhibitors, with the documented being more than 150.

From the total number, data shows

over 120 companies are from Kenya and neighboring countries. The companies emanated from different agricultural value chains and covered a large part of the sector.

Therefore, the exhibition clearly demonstrated the potential of our local market in terms of production and processing of agricultural produce.

Additionally, from some of the innovations on display, it is evident Kenya has a raft of opportunities which if fully unlocked will be a gamechanger in creating jobs especially for the youths.

PHILIP KELLO HARSAMA

PRINCIPAL SECRETARY: CROP DEVELOPMENT, MINISTRY OF AGRICULTURE AND LIVESTOCK DEVELOPMENT

With the exhibition bringing on board various agricultural technologies and innovations, the government's commitment is to support innovative ideas aimed at growing the agriculture sector

Official opening and unveiling of the first Agri-Africa expo

The four days Agri-Africa Expo and Conference was officially opened on May 9, 2023 by the Principal Secretary, State Department for Crop Development in the Ministry of Agriculture and Livestock Development, Kello Harsama.

While delivering the speech from the Ministry of Agriculture and Livestock Development's Cabinet Secretary, Mr Mithika Linturi, the Chief Guest lauded the organizers of the event saying the

forum provided a solid central data-based platform for farmers, a move he said ignites growth in the sector.

The agricultural show took place at a time Kenya is engineering the approach to its farming systems.

The move is largely informed by the devastating effects of climate change, global warming, and more so the severe drought that had been experienced before the onset of the long rains in March 2023.

The famine was cited as one of the worst in 40 years, hence the need for farmers to have a platform that they can learn modern technologies and innovations to mitigate the effects.

"I thank the CEO Agri-Africa Exhibitions Ltd, Mr Tito Mutai and the Nation Media Group, for organizing the expo," PS Harsama told the participants.

The event showcased the potential of agriculture in the country and Africa at large, innovative agricultural technologies

MESSAGE FROM THE MINISTRY

and ideas for our local markets.

The platform aimed at creating direct local connection between farmers and market, as well as providing a solid central data-based platform to spur growth in the sector.

The expo focus was aligned to the Kenya Vision 2030, Agricultural Sector Transformation and Growth Strategy (ASTGS) running from 2019 to 2029.

Key note message from the Agriculture Ministry

With the current regime, Kenya Kwanza government, specific focus being on food security, nutrition, manufacturing, agro processing and incubation of Micro, Small and Medium Enterprises (MSMEs) for various agricultural value chains and sustainable development goals, PS Harsama said such kind of forums provide opportunities for farmers to network and acquire information.

To achieve the strategic objectives, dissemination of farming information is important.

Agri-Africa Expo and Conference 2023 theme being; *Using Information to Power Agriculture in Africa*, Hon Harsama cited various initiatives by the government enabling farmers to have access to the right information.

"Kenya Agricultural Livestock and Research Organization (Kalro), a state-owned institution, for instance has developed an integrated digital platform giving farmers access to real time location,

region and recommended information on agro ecological requirements, crop varieties, soil preparation, sowing rate, irrigation, farm inputs, pests and disease control, harvest time, and storage option based on weather forecast."

Such kinds of modern technologies aimed at revamping agriculture are easily circulated through a one-stop forum where farmers gather together with the stakeholders and actors in the food value chain, the PS said.

With the exhibition bringing on board various agricultural technologies and innovations, Mr Harsama affirmed the government's commitment to support innovative ideas aimed at growing the

agriculture sector.

"We encourage all kinds of initiatives, inspiring processing and value addition. That way, we will fetch a lucrative market. Government is committed to support processing and adoption of modern technologies and innovations to spur growth of the food production value chain. And to the organizers of this expo, you have our full support as the government to ensure food security and hunger is addressed," Mr Harsama said.

Kenya has huge potential to create wealth in agriculture, hence such forums showcase the opportunities by disseminating the information.

MESSAGE FROM THE MINISTRY

Why KICC as the venue?

Nairobi is the face and the capital city of Kenya, hosting all the ministries headquarter offices, government owned agencies, parastatals and even most of the private companies, organizations, and Non-Governmental Organizations (NGO), ambassadorial and high commissioners' representatives from countries across the globe.

The Kenyatta International Convention Centre (KICC) is a Kenyan landmark. Mr Tito Mutai says he chose it as the venue since it is easily recognized not just by locals - Kenyans - but also by foreign guests.

Due to its iconic nature, the KICC was a

perfect venue due to its central location in the city, the size of the conference rooms and the fact that it is one of Kenya's Tourist Sites.

It provided convenience to both Agri-Africa Expo and Conference 2023 visitors, exhibitors, and partners in terms of accessibility and space.

Locally known as the 'KICC', the facility was commissioned by Mzee Jomo Kenyatta, the first President of the Republic of Kenya, in 1967.

It is located in the City Square of Nairobi, and is a crucial address for a number of government offices.

In addition, it is an internationally

renowned venue for conferences, meetings, exhibitions and special events within walking distance of several five-star hotels.

For decades, it has been the host of several international conferences, seminars, exhibitions and summits and is ranked as one of the top places to hold events.

And during the four days forum, it was all pomp and color as the exhibitors decorated their stands and gazebos with the range of products in their line of production in the food value chain, technologies, innovations, machinery, tools and equipment used in farming.

How Kigali Farms created a pool of networks during the Expo

Kigali Farms, a mushroom producing company created a pool of market networks during the Agri –Africa Expo and Conference 2023

Kigali Farms, a Rwanda based mushroom growing company, with a sister distributing outlet in Kenya; The Great Mushrooms, was among the exhibitors who graced the forum.

On its stand, the fleshy spore-bearing fruiting body of a fungus, typically produced above ground, on soil, or on its food source whose uptake across the globe is steadily rising, attracted hundreds and thousands of participants.

On display were White Button mushrooms, Tree Oysters, King Oysters, Cremini and Portobello.

The company was founded in 2010 by one Mr Laurent Demuynck.

In 2011 it started substrate production and cultivation of Tree Oyster mushroom variety in Rwanda.

Mr Philip Harsama holding mushrooms from Kigali Farms exhibitors in the Rwanda pavilion.

“Five years later, we introduced White Button mushroom cultivation and in 2017 expanded our market to Kenya,” informed Charlyn Chebet, Kigali Mushrooms Kenya country manager.

So far, according to Ms Chebet, Kigali Mushrooms has trained over 700 farmers on how to professionally produce tree Oyster Mushrooms.

The company has assisted farmers to produce the tree Oyster spawn, and also work hand in hand with a tube production plant in Rwanda to produce the tubes.

The mushrooms are produced for export, and others consumed locally in Rwanda.

With the fungi praised for being rich in Proteins, Carbohydrates, Vitamins and minerals, often exceeding levels registered in most widely consumed cereal staples, Kigali Mushrooms has established a ready market in Kenya, in outlets such as Carrefour, Naivas, Quickmart, Corner shop and Onn The Way, Ms Chebet lauding Agri Africa Expo and Conference for offering the company a platform to broaden its market.

Other markets are hotels and restaurants in Nairobi, which have adopted mushrooms as an alternative source of proteins.

Mushrooms are also high in antioxidants, phosphorus, iron, calcium, and are low in calories, thus they are popular among individuals who are concerned about lifestyle-related diseases.

“The forum created a pool of market networks, and even potential farmers keen on growing mushrooms,” she stated.

With the fungi praised for being rich in Proteins, Carbohydrates, Vitamins and minerals, often exceeding levels registered in most widely consumed cereal staples, Kigali Mushrooms has established a ready market in Kenya, in outlets such as Carrefour, Naivas, Quickmart, Corner shop and Onn The Way, Ms Chebet lauding Agri Africa Expo and Conference for offering the company a platform to broaden its market

The Great Mushrooms Company, has a warehouse at the Jomo Kenyatta International Airport (JKIA) Freight in time building cargo section, for supplying Kigali Farms produce to the targeted markets.

The Agri –Africa Expo visitors were treated to a rare revelation and training that the fungi can be dried and packaged, thus prolonging its lifespan as the farmer looks for a competitive and lucrative market.

“They are also preserved and canned,” Chebet said.

As the East Africa region embraces the venture, access to good quality spawns (seeds used for production) remains one of the biggest challenges facing farmers.

However, Chebet affirmed that Kigali Farms is striving to come up with a solution to bridge the gap by producing and sourcing affordable mushroom spawn.

The company is currently supplying one of the finest spawn in the country, which can be sourced directly from the JKIA warehouse.

Following the company’s immense contribution in the mushroom value chain, through the Agri –Africa Expo and Conference 2023 Kigali Farms got a chance to be featured by a local Kenya daily, among other exhibitors.

The coverage by the *Seeds of Gold*, an agribusiness magazine published weekly by the *Daily Nation*, print publication owned by Nation Media Group Plc, gave it public limelight with some potential mushroom farmers in Kenya reaching out indicating their interest in venturing into the fungi crop.

PS Harsama assessing seedlings from an exhibitor.

Use of modern technology in growing vegetable, fruit, herbs and tree seedlings

With the devastating effects of climate change, farmers are encouraged to adopt modern technologies for mitigation, and the approach was top notch during the Agri Africa Expo and Conference 2023.

Kimplanter Seedlings and Nurseries, a vegetable seedlings propagating company demonstrated to the visitors the use of seedlings trays.

The company also propagates valuable fruit seedlings, herbs as well as trees.

The seedlings mature in three weeks, and are of good quality and healthy, she lauded the modern technology, saying Kimplanter Seedlings and Nurseries has embraced 200- and 442-hole capacity trays

“Most farmers are struggling to raise seedlings using traditional methods. However, with the tray seedlings technology, pests and diseases are easily manageable, hence high success germination rate,”

Ms. Wambui Mwangi

With the technology, farmers get value for their produce as quality of seedlings is among the determinant factors for good farm yields.

The tech reduces the period seedlings stay in a nursery bed if they were to be grown using traditional methods - raised soil seed beds.

Ms Wambui Mwangi, the Operations Manager, said the technology guarantees a farmer over 90 per cent seed germination rate.

The approach thus enables farmers to plan their planting seasons appropriately.

Security of the plantlets against distractors such as domestic animals' invasion, birds as well as pests is addressed, Wambui affirmed.

Similarly, in case of drought, the venture still thrives since propagation is done in a controlled facility.

“Most farmers are struggling to raise seedlings using traditional methods.

However, with the tray seedlings technology, pests and diseases are easily manageable, hence high success germination rate,” she stated.

The seedlings mature in three weeks, and are of good quality, she said lauding the modern technology, saying *Kimplanter Seedlings and Nurseries* has embraced 200- and 442-hole capacity trays.

The facility was established by Caroline Mwangi in 2014.

“Use of modern technologies in growing crops will help us a long way in addressing climate change whose ripple effects have adversely impacted the agricultural sector,” said Ms Caroline, the founder and CEO.

Planting media used is coco peat instead of soils.

Some soils are contaminated with diseases, hence contributing to low production rate.

Ms Wambui praised the Agri-Africa Expo and Conference for exposing their business and services to a larger market.

“Through networks, such trade fairs broaden market reach.” “We are excited to explore export markets, and this is where the foundation begins,” she believes.

Operating with a network of over 1,000 farmers across Kenya, Kimplanter has nursery centres in Kiambu, Murang'a and Kajiado.

Wambui hopes that the agricultural fair would attract more clients in the future, resulting in the creation of jobs.

A Baringo-based beekeeper's new niche market created at the expo

Ms Caren Rutto, a beekeeper from Mogotio, Baringo County could not hide her joy following new market networks she created by participating in the Agri-Africa Expo and Conference 2023.

Farmers across Kenya have the ability to produce sufficient food, but marketing has been the hardest hurdle.

For Ms Caren, a smallholder beekeeper, it has not been easy for her to maneuver

the bee products market especially due to the adulteration of honey. The altered honey has created a challenge to real producers because their pricing is very low, creating strong competition.

She lauds the first edition of the Agri Africa Expo, which exposed her to the wider markets.

"I have interacted with participants who are potential buyers from across the country and even beyond the Kenyan border. There is a lot to offer in the honey production value chain, with a raft of opportunities especially

in processing which remains untapped,” Caren observed.

According to the Directorate of Livestock Production at the Department for Livestock Development, Apiculture data shows honey production in Kenya currently stands at 18,000 metric tons per year.

The bee product has recorded a decline, compared to what the country used to produce 10 years ago, 25,000 metric tons per year.

To Ms Caren, the gap is an opportunity for players in the apiculture sector to explore more.

During the exhibition, she showcased a

range of bee products in her line. The farmer's tent had refined honey, wax and propolis.

With an outlet shop in Nairobi, Caren supplies honey in the county, targeting supermarkets and hotels.

“Through the expo, customers from Mombasa and Nyeri have come on board,” Caren revealed.

The nod demonstrates how impactful the Agri Africa Expo and Conference was for both exhibitors and the visitors.

Caren has been in the honey value chain since 2005, revealing she currently has 40 beehives in Baringo.

In a month, Caren revealed, she sells over 1,000 kilos of honey but with the new market niche, the sales volumes are projected to increase.

She is a member of *Kimose Self-Help Group*, a women's association in Mogotio who are bee keepers.

Value added bee products attracts a lucrative market, she admitted.

Apart from selling refined honey, she is also into the line of candles and propolis. Candles are made from beeswax.

Propolis is a compound produced by bees thought to fight infections, healing wounds, and viral diseases.

A kilo of wax, Caren has priced it at Sh400 while that of propolis is Sh2,500.

That of pure refined honey, she offers at Sh700.

Simlaw seeds exhibitor showcasing their drought tolerant crops to visitors/clients.

Simlaw Seed Company established rapport with farmers' groups

There is no doubt that climate change effects are here with us as a country, continent and world at large.

Kenya is among the countries listed severely impacted by climate change, in the Horn of Africa, according to the Food and Agriculture Organization of the United Nations (FAO).

With the farming activities carrying the burden of climate change effects, which include drought, floods and erratic rainfall distribution, it calls for farmers to adopt highly resilient seeds.

At the Agri Africa Expo and Conference 2023, Simlaw Seed Company Ltd, a subsidiary of Kenya Seed Company showcased a variety of seeds.

Simlaw Seed is a leading vegetable seed marketing company with over 30 years of experience in production, processing and marketing of horticultural seeds in Kenya and the Eastern Africa region.

Located in Nairobi, along Kijabe Street, the seeds supplier has been doing periodic research to improve their products in a bid to come up with seeds that are resilient to drought, high yielding and early maturing.

"What makes us stand out; we do research for our products and production. Our products are locally made," stated Shally Chahenza, a Simlaw Seeds expert.

According to the company's testimony, their participation experience at the expo was fantastic, as they engaged with farmers from various sections and places of the country, as well as beyond Kenyan borders.

"Some came from as far as Uganda and Rwanda, who were delighted to meet us and had a one-on-one inquiry about the products we supply them," Ms Shally noted.

Simlaw Seeds made a rapport with farmers' groups, pledging to engage the food producers further through farm visits.

The move will enable the company to improve their products to meet farmers' expectations and get to understand the challenges they encounter in their endeavors.

Processor's reprieve as KCIC intervenes to reduce post harvest losses

Post-harvest management has been a major challenge in Kenya's agricultural sector, with an estimated loss of 20 to 30 per cent of harvested crops.

With the devastating effects of climate change where drought and floods are a norm, most farmers lose a lot due to lack of proper management.

Agri Africa Expo and Conference 2023, offered a raft of solutions through exhibitors and actors who participated in it.

It is a tremendous loss when 20% to 30% of harvests go to waste due to floods or a lack of market, and systems in place such as value addition and processing are the key to salvaging them.

Eco Sprew Kenya Ltd, a processing company owned by a young entrepreneur demonstrated how some valuable crop yields prone to post-harvest losses can be value added and fetch a competitive market.

Shem Mecheo, the proprietor, makes bread jam from beetroots.

There is great value in processing, says Mecheo of Eco Sprew Kenya, a processing company, lauding the Kenya Climate Innovation Centre's (KCIC) intervention that has since moulded him through capacity building training and support

The spread is processed with three product lines which include; strawberry, pineapple and banana.

"Most beetroot, strawberry, pineapple, and banana farmers are victims of post-harvest losses, particularly when the produce is harvested but not sold at a profitable market."

"Visit most of the farms and markets, you will not avoid seeing such kinds of products which take a short period to

KCIC Chief Executive Officer Joseph Murabula giving closing remarks at the 2023 Agri Africa exhibition and conference.

mature and whose shelf life is short, rotting. Value addition is key to saving them," Mr Shem, the company CEO explained.

For the entrepreneur, nothing goes to waste, a move that has enabled farmers he has contracted see value in their contribution to the agricultural sector.

There is great value in processing, Mecheo reiterated, lauding the Kenya Climate Innovation Centre (KCIC) intervention which has since moulded him through capacity building training and support to explore value addition.

Thanks to the KCIC, under the leadership of CEO Joseph Murabula, post harvest losses is now firmly under control.

Mr Mecheo has contracted around 278 farmers from the counties of Nyandarua and Kisii after realizing that the produce with the highest market value was beetroots. He also grows beets in Kisii.

With a processing facility in Ongata Rongai, Kajiado County, Mecheo said if value addition space is explored to the letter, the niche will help in alleviating poverty alongside creating job opportunities.

The Eco Spew Kenya Ltd proprietor believes innovative farmers and entrepreneurs are rich in ideas, but what lacks is a platform to disseminate the information.

Agri Africa Expo and Conference 2023 whose theme was "Using Information to Power Agriculture in Africa", offered him a space to communicate his skills and ideas.

Additionally, he networked to learn more about marketing and from other players in various fields.

Ethiopian Ambassador to Kenya hopeful Agri Africa Expo and Exhibition will be an annual event citing 2023 edition promoted the country's products

Agriculture PS at the Ethiopian embassy booth interacting with a leather exhibitor from Ethiopia. Looking on is Hiwot Tufa, a representative of the embassy. Inset: Ethiopian Ambassador to Kenya, Mr Workalemaw Desta.

Over 65 per cent of the labor force in Ethiopia depends on the agriculture sector for livelihood.

Though the country's landmass is largely Arid and Semi-Arid (Asal), Ethiopia is among the best producers of cereals such as wheat and sorghum, fruits and coffee in the African continent.

The Horn of Africa based nation also practices livestock keeping.

Expressing his great gratitude following the exposure by the Agri Africa Expo and Conference 2023, Ethiopian Ambassador to Kenya, Mr Workalemaw Desta said the agricultural trade fair that was graced by over 170 local and international exhibitors and with attendance of over 7,000 visitors largely promoted the country's products.

Apart from the host, Kenya, and Ethiopia, other participating countries were Tanzania, Rwanda, Uganda, India, Israel, Turkey and Indonesia.

"On behalf of the Ethiopian Embassy, I express our great gratitude for giving us this chance to promote our products in this wonderful exhibition.

"Agriculture sector has an upper hand in the Ethiopian economy in terms of export and job opportunities, with more than 65 per cent of our labor force depending on agriculture for livelihood," said Mr Desta, who is the Deputy Head of Mission Federal Democratic Republic of Ethiopia in Nairobi.

The diplomat, however, lauded the

Continued on page 24>>>

Continued from page 23>>>

expo saying it created and offered Ethiopia an opportunity to promote its agricultural products in Kenya and neighbouring countries.

Also on display at the Embassy's stand were leather products, such as shoes and handbags.

The country also showcased milled coffee berries.

"We witnessed a lot of people buying our leather products, including shoes. This exhibition is very important to us since the Ethiopian economy predominantly relies on agriculture," Ambassador Desta stated.

As the event demonstrated the positive impacts to the participants, the diplomat is hopeful Agri Africa Expo and Conference will be an annual occasion.

He affirmed Ethiopia's participation in next year's, 2024, exhibition.

...the agricultural trade fair was graced by over 170 local and international exhibitors and with attendance of over 7,000 visitors largely promoted the country's products

Amb Dr Tegla Lorupe, president Tegla Lorupe Peace Foundation (TLPF).

VISITORS

The exhibition had more than 7,000 visitors from across the globe, with over 5,000 having been documented, most of whom are potential buyers and investors in the agriculture sector.

Armed with materials to document the learnings, the visitors interacted with the exhibitors, agricultural stakeholders from both public and private sectors, players and actors, with farmers getting a rare opportunity to field questions to the experts addressing topical issues and challenges facing them through their commitment in contributing to the food basket.

It is prudent to note that at the agricultural show, the entry was free for participants - visitors.

The turn up demonstrated market enhancements through connections and deals that were created in the exhibition.

Furthermore, the Micro, Small & Medium Enterprises (MSMEs) at the exhibition had an opportunity to participate and sell their products in the event thanks to the support from some of our key and strategic developmental partners such as the Kenya Climate Innovation Center (KCIC), among others.

EXHIBITION'S OBJECTIVES

Under the exhibition theme; Using Information to Power Agriculture in Africa, Agri-Africa Exhibition Limited came up with four main objectives for the forum: -

1. To showcase the potential of Agriculture in Kenya and Africa
2. To enhance direct global connections between farmers and markets
3. To introduce innovative agricultural technologies to the local market
4. To commence creation of a solid central database platform for agriculture in the region.

The 2023 Agri Africa Expo & Conference Summary

The 2023 Agri Africa Expo and Conference clearly communicated the theme and to the best of the organizers' ability, achieved the first three main objectives of the exhibition in the following ways:

The total number of exhibitors was 170, out of which more than 150 were documented.

From the number, more than 120 companies are from Kenya and neighboring countries. These companies from the region were from different agricultural value chains and covered a large part of the sector.

Tawakal Farmers Marketing Cooperative Society, a women's Isiolo County based group, for instance showcased a variety of pastoralist's products.

With an aggregation program of 150 camel's farmers, the society processes the drought resilient animal's milk to yoghurt.

They have five lines of blended yoghurt namely strawberry, vanilla, mango, chocolate and apple.

Leyla Adan, a member, informed that the group began by selling raw and pasteurized milk, thanks to the Egerton University's mentorship and capacity building programmes, which trained them on milk processing.

Addressing matters of food security and hunger, farmers, especially the smallholder who form a large group contributing to the food basket in the African continent need empowerment platforms and programs offering them adaptation techniques against drought and floods

Other products processed by Tawakal Farmers Marketing Cooperative Society are; cheese, butter, ghee and fermented milk.

They also can camel's meat, locally referred to as 'Nyirnyir' by the pastoralists.

They now see the value of processing, as the approach fetches them lucrative market deals, especially in cities such as Nairobi.

Where a litre of raw camel milk retails at Sh150, when value added to become yoghurt the volume fetches as high as Sh240.

Therefore, the exhibition clearly demonstrated the potential of the local market in terms of production and processing of agricultural produce.

The exhibition had more than 7,000 visitors from across the globe, most of whom are potential buyers and investors in the agriculture sector.

The turn up demonstrated market enhancements through connections and deals that were created in the exhibition.

Furthermore, the SMEs at the exhibition had an opportunity to participate and sell their products in the event thanks to the support from some of our developmental partners such as the Kenya Climate Innovation Center (KCIC)

and other strategic partners.

The expo and conference had local and international companies showcasing various innovative agricultural technologies, irrigation systems, farm tools and equipment, climate change solutions, without forgetting modern techniques on value addition and processing, as well as ideas that are certainly aimed at improving agricultural productivity in the region

Some of the examples are drones manufactured in Rwanda for use in agriculture, machineries from Belarus, technological innovations from Israel, India's innovative ideas to boost agricultural productivity and among others.

In essence, the exhibition was relevant in that it provided a variety of climate smart agriculture options to lessen the catastrophic effects of climate change.

For sure, addressing matters of food security and hunger, farmers, especially the smallholder who form a large group contributing to the food basket in the African continent need empowerment platforms and programs offering them adaptation techniques against drought and floods.

A center for agricultural information dissemination

Agri-Africa Exhibition Limited is not just an agricultural event company but also an information service center for

Continued on page 54>>>

Continued from page 53>>>

agricultural information and content. To achieve our fourth objective requires data that is credible, legitimate, and viable for dissemination to the public to encourage more people to embrace agriculture and rely on it as a sustainable economic activity.

The companies that participated in this very lucrative event, offered products, services and solutions that require little or no assessment because the products and services that were on display can be ascertained to be true.

As a result, our visitors got a chance to interact one-on-one with real products and services from credible businesses to potentially create business relationships with reputable companies.

Market solutions

Access to a competitive market fetching lucrative proceeds, undoubtedly remains one of the major challenges facing farmers and players - between farmers and the consumers, traders.

Consider the horticulture crops that farmers grow with limited financial resources, such as different fruits, vegetables, tea leaves, coffee, cereals, and so on. The vulnerable farmers suffer a lot as a result of the bad infrastructure, which is a recipe for attracting unwanted middlemen.

However, the first edition of the Agri Africa Expo and Conference demonstrated that such kinds of challenges can be addressed, by having a central forum where farmers interact with the buyers thus improving

purchasing power.

It is certain, most contributors in the food production value chain who turned up for the 2023 exhibition got market linkages and networking.

Though it is not measurable, exchange of contacts for current and future engagements took place.

The expo demonstrated that there is indeed a solution to the marketing challenges.

Agri Africa Exhibitions Ltd Commitment

The next step on implementation of our post-exhibition strategy is to commence our organization's long-term journey of centralization of information on the agriculture sector with the data on the 2023 Agri Africa Expo and Conference as the cornerstone.

The excess of 150 exhibitors and more than 5,000 documented visitors has provided us with a starting point in achieving our long-term objective of being the go-to company when it comes to information on innovations and available opportunities in the region on matters of agriculture. The agricultural sector is the backbone of Kenya's and African continent economy.

In Kenya, for instance, it is estimated to contribute approximately 33 per cent of the country's Gross Domestic Product (GDP). The sector also employs more than 40 per cent of the total population and 70 per cent of the rural population.

Gaps and challenges in 2023 Agri Africa Expo

The agricultural trade fair being the first to be organized by CEO Tito Mutai, through the support of strategic partners, Nation Media Group and the Kenya Climate Innovation Centre (KCIC), noted the following gaps in the aftermath:

1. Completing the entire agricultural value chain, key components such as transporters, certification bodies, importers and exporters are crucial and vital. Though they partially missed to grace the event, their immense contribution is needed.
2. Awareness and education on the role they play to spur the sector is important as all actors are dependent on each other.
3. Similarly, foreign exhibitors were faced by a number of challenges especially on certification of their products to be allowed entry. Last moment preparation, for the immigrants Visa processing, was also another gap we are working on sensitising the participants.
4. For future consistency, interaction and rapport, is also a factor we are looking into to establish a prolonged relationship between exhibitors, farmers and consumers.

Mucahit Acar of Comex poultry equipment technologies explaining to a client the poultry solutions they offer and how the technology works.

Modern poultry equipment to meet growing meat demands

As the human population increases by day, poultry products demand is projected to double.

According to the Food and Agriculture Organization of the United Nations (FAO) 2018 report, consumption of poultry meat and eggs is estimated to rise to 92,000 tons and 245,000 tons respectively by 2050.

The upsurge calls for an intensive campaign to increase poultry production, so that the supply meets the rising demand.

And for that reason, Mr. Mücahit Acar from Comex Poultry Equipment Technologies graced the Agri Africa Expo and Conference 2023 with modern poultry equipment systems.

The Turkey based company manufactures automated feeding, drinking, heating, ventilation and cooling systems.

Sophisticated systems are that a farmer can control operations using a mobile phone.

That applies for systems that are connected to a cellphone.

"For instance, 20,000 birds can be managed by two employees alone," informed Mr. Acar.

As Agri Africa Exhibitions Ltd is on top gear laying the foundation for next year's agricultural show, Comex Poultry Equipment Technologies indicated willingness to participate following the marketing network it established.

"We are happy people are getting interested in our products. Next year, 2024, we are planning to attend," Mr. Acar said.

Israel's future engagement with Kenya to spur agriculture

Israeli's Economic and Trade Mission to Kenya was also among the foreign exhibitors who participated during the Agri Africa Expo and Conference 2023, first Edition held at the KICC, Nairobi.

Israel is one of the countries across the globe with sophisticated farm tools, equipment and machinery.

The Arid and Semi-Arid Land (Asal) country, located in the Middle East, along the Eastern Coastline of the Mediterranean Sea, and bordering Lebanon, Syria, Jordan and Egypt, leads in adoption of modern technologies and innovations spurring the agricultural sector.

Israel Economic & Trade Mission to Kenya, enumerated to the visitors the roles it plays in business and agricultural value chain.

"Our main job is to act as a bridge between the Kenyan economy and that of Israel, by providing free scouting services for Israel companies

We also offer business delegations and tours to Israel for people looking to explore potential collaboration and business with Israel, from Kenya

looking for Kenyan partners," revealed Joannah Wanjiku, Israel Mission Representative to Kenya.

Its commitment is diverse, and for Kenyan companies looking for agriculture solutions it offers services by connecting them to Israel service providers.

"In agriculture it could be as a distributor, implementor of a project or a partner." In addition, Ms Wanjiku said: "We also offer business delegations and tours to Israel for people looking to explore potential collaboration and business with Israel, from Kenya."

And as Kenya strives to mitigate the devastating effects of climate change, Israel offers a raft of solutions; modern technologies and innovations enabling growing of crops even during drought season.

They include sophisticated water harvesting and irrigation systems, which if adopted can turn Kenya into a 'mini Israel'.

Ms Wanjiku was pleased to announce that they made a fair number of contacts at the Agri Africa Expo and Conference 2023, which would essentially lead to future business involvement.

Role of the media in enhancing growth of agriculture

Agri Africa Expo and Conference 2023 held at the iconic KICC, Nairobi would not have been successful without the presence of the media.

The mega agricultural forum that attracted thousands of visitors and hundreds of exhibitors from across the globe, was fruitful following a close partnership by Agri Africa Exhibitions Ltd and Nation Media Group Plc, the leading and largest media company in

East and Central Africa.

That was made possible through an MoU that made Nation Media the main partner for the inaugural 2023 Agri Africa Expo and Conference.

The company through its media platforms; Broadcast (NTV), print (Daily Nation and Taifa Leo newspapers), websites and social media sites run stories and testimonials of the event, alongside live streaming of the panel discussions held during the official opening.

Agri-Africa therefore recognizes the major role played by the media in ensuring outreach of information and especially in this case creating awareness for the Expo and Conference.

Media is a powerful tool that in many countries across the globe has shaped governance, brought integrity in leadership and empowering society through informative, educative and entertaining contents.

In this case, Agri-Africa acknowledges the immense contribution by the media in helping to revamp the agricultural sector.

We look forward to partnering with media houses, both at local and international level during our second edition, 2024.

The Agri - Africa Expo 2023 outlined East Africa's potential in food production chain

With the theme being 'Using Information to Power Agriculture in Africa', the first edition of the Agri - Africa Expo and Conference unified the East African region.

From the database of the Agri-Africa Exhibition Limited, the trade fair attracted countries such as Tanzania, Uganda, Rwanda and Ethiopia.

Clientele and exhibitors' objectives were achieved, Mr Mutai estimating a more than 80 per cent success rate.

Interestingly, the expo portrayed the immense potential of the East African Region countries in food production.

The event offered a platform for networking; farmers, consumers with the key stakeholders and players in the agricultural value chain.

Market networks were created, not only at the host level, but even beyond the East Africa Region and Africa at large.

For instance, a Rwanda based company is

working on setting up a drone outlet in Kenya, an opportunity that was enabled through the agricultural and trade show held at the iconic KICC, Nairobi.

"Our goal is to create a data resource centre for agriculture information services, by identifying an opportunity packaging it and disseminating to the public - the ultimate target being farmers. The expo, depicting the East Africa Region has a lot to offer on the food basket and address the hunger menace," says Mr Mutai.

There was an exchange of ideas, amongst the countries making up the

larger part of the region.

Mr Workalemaw Desta, the Ethiopian Ambassador to Kenya, said the agricultural trade fair largely promoted the country's products.

"Agri-Africa Expo and Conference 2023, gave us a chance to promote our products at a regional level. And we are looking forward to participating in the forthcoming editions," pledged Mr Desta, the Deputy Head of Mission Federal Democratic Republic of Ethiopia in Nairobi.

More than 65 per cent of our labor force in Ethiopia depend on agriculture for livelihood.

The country's experience is an affirmation of the many opportunities in the East Africa Region, which if untapped can be a gamechanger.

Apart from Rwanda and Ethiopia, Tanzania and Uganda some farmers who attended the event got a market avenue for their produce.

Moving forward, Mr Mutai says he is looking at evolving around investment in agriculture to spur the growth in the sector.
